EDUCATION

Technical University of Munich (TUM) Oct 2026 – Present
MSc in Electronics & Communications Engineering
- DAAD Scholarship recipient (full funding)

Istanbul Technical University Sep 2021 – Jun 2026
BSc in Electronics & Communications Engineering – GPA: 3.59 / 4.0
- Relevant Courses: Machine Learning, Artificial Neural Networks
- Certifications: AWS Certified Solutions Architect – Associate

EXPERIENCE

BSH Hausgeräte / Bosch Group Sep 2025 – Jul 2026
Data Science Project Student (NLP)
- Co-designed core components of an internal enterprise LLM platform used by 5,000+ monthly active employees, introduced reasoning-aware generation and token-level streaming
- Integrated custom MCP servers for internal Atlassian services (Jira and Confluence) to enable natural-language access to knowledge systems, cutting information retrieval time by up to 50%
- Implemented a RAG-based onboarding agent with a dedicated vector space covering 100+ onboarding topics to guide new users through platform capabilities, reducing onboarding friction
- Developed a GenAI-based image generation platform for marketing teams, enabling brand-aligned concept image creation with consistent product and person references, and reusable creative workflows

Airties Aug 2025 – Sep 2025
Software Engineer Intern – Infrastructure
- Implemented and optimized CI/CD pipelines, updated automated linting, container scanning, and security check procedures, reducing deployment errors by ~30%
- Developed Go-based microservices to automate container and package transfers during repository mirroring (from Gerrit/GitHub → GitLab), improving full repository migration times by ~60%

Microsoft Jun 2025 – Aug 2025
AI/ML Engineer Intern
- Designed and built phiDelta, a fully local AI research agent with planner-executor-evaluator architecture, enabling 50+ dynamic tasks with real-time reasoning, RAG, tool integration, and multimodal capabilities
- Developed end-to-end agent workflows with Microsoft Phi-4 and gpt-oss-20b models, improving tool execution reliability by 60% and cutting follow-up failure cases by ~40%, benchmarked across 30 scenarios

RESEARCH & PROJECTS

Istanbul Technical University May 2025 – Jun 2026
Undergraduate Machine Learning Research Assistant
- Developed a DETR-based multi-class crowd localization model for aerial imagery (dilated backbone, focal loss); on RSOC, cut mean counting MAE by 26% vs. the best competing method and achieved the top mean F1 (0.74)
- Built automated PyTorch training pipelines with distributed multi-GPU support (3× RTX 4090), managing 4+ server environments and experiment orchestration workflows, reducing experiment setup time by up to 90%

ITU BIOBEE Project Team Oct 2024 – Jun 2026
Machine Learning Engineer
- Designed AI-driven object detection and EMG signal processing pipelines for a bionic arm prototype
- Achieved 4th place in the nationwide TEKNOFEST competition, outperforming hundreds of teams

PUBLICATIONS

Multi-class Crowd Localization for Object Detection in Aerial Images Sep 2026
K. Y. Daskiran, et al.
IEEE Innovations in Intelligent Systems and Applications Conference (ASYU 2026) – Accepted, oral presentation

SKILLS & INTERESTS

Languages: Python, Go, C, C++
AI / ML: LangChain/LangGraph, LLMs, AI Agents, MCP, Computer Vision (ViT, DETR), PyTorch
Cloud / DevOps: Docker, AWS, CI/CD, Linux, Git, FastAPI
Awards: National Quantum Computing Hackathon – TEKNOFEST: 1st Undergraduate Team
